Summary

Software engineer with experience building and operating backend systems, automation pipelines, and cloud-deployed services in production environments. Strong interest in cloud platforms, infrastructure automation, and scalable systems. Experienced working with containers, distributed data systems, and CI/CD in fast-moving teams.

Education

University of Massachusetts , Amherst, MA, United States	Sep 2024 – May 2026
Master of Science in Computer Science	GPA: 3.86/4.00
University of Mumbai , Mumbai, India	Aug 2019 – May 2023
Bachelor of Engineering in Computer Engineering	GPA: 3.87/4.00

Professional Experience

Software Developer Summer Intern Karpuragaurai Technologies, India	May 2025 – Aug 2025
Tech Stack: Python, Redis, REST APIs, AWS, Docker, Celery	
- Implemented semantic retrieval using PostgreSQL and PGVector to index client knowledge bases for grounded LLM responses - Deployed and operated containerized backend services on AWS ECS with autoscaling and load balancing - Added Redis-based caching layers to reduce end-to-end request latency by 30% under production load. - Worked with Dockerized services, cloud networking, and deployment configurations to support stable production releases.	
Founding Full Stack Software Developer Lab Systems (I) Pvt. Ltd., India	May 2023 – Aug 2024
Tech Stack: NextJS, Python, C++, Flask, SQL/NoSQL, Cloudflare, Docker, Software Architecture, Solution Designing, AWS	
- Built Python and C++ based backend services and integrated with MongoDB and Elasticsearch databases for production systems - Designed and maintained REST APIs and backend workflows supporting enterprise clients and high-volume data access patterns. - Containerized backend services with Docker and managed cloud deployments to ensure release consistency and reliability. - Implemented workflow automation for investigation pipelines, reducing manual processing and improving turnaround time. - Established engineering workflows including version control, code reviews, and release practices to support sustained delivery.	
Full Stack Software Developer Intern Lab Systems (I) Pvt. Ltd., India	Aug 2022 – Apr 2023
Tech Stack: Python, Node.js, REST APIs, MongoDB, LevelDB, Docker, Linux, Web Security, Distributed Systems, System Design	
- Developed a solution for cryptocurrency forensics applications, reducing manual analytical processing time by 70% - Implemented unit tests and validation checks to ensure correctness and reliability of backend system changes over time - Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across 2 Billion transaction records - Contributed to high profile case involving global clients with financial exposure exceeding \$20M in sensitive environments	

Skills

Cloud & Infrastructure: AWS (ECS, EC2, ALB), Docker, CI/CD pipelines, Cloudflare
Backend & Systems: Python, Node.js, REST API design, PostgreSQL, MongoDB, Redis, background jobs, caching
Distributed Data & Automation: Large-scale data processing, workflow automation, asynchronous systems
AI & Data Systems: LLM integration in production systems, RAG pipelines, embeddings, vector databases (PGVector)
Engineering Practices: System design, testing (PyTest, Mocha), code reviews, release practices

Relevant Projects

LLM-Router: Intelligent LLM Selection and Cost Optimization Tech: PyTorch, DistilBERT, CodeBERT	Project Link
- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests. - Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality	

Patent

D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)	Date: 19 Sep 2023
German Patent File No - 20 2023 102 823.3	
Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments
