Summary

Software Engineer with hands-on experience building and operating blockchain data ingestion systems, indexing large-scale on-chain data, and developing backend services for cryptocurrency investigations. Strong Python background, direct RPC interaction with Bitcoin and Ethereum nodes.

Education

University of Massachusetts, Amherst, MA, United States	Sep 2024 – May 2026
Master of Science in Computer Science	GPA: 3.86/4.00
University of Mumbai, Mumbai, India	Aug 2019 – May 2023
Bachelor of Engineering in Computer Engineering	GPA: 3.87/4.00

Professional Experience

Software Developer Summer Intern | Karpuragaurai Technologies, India May 2025 – Aug 2025
Tech Stack: Python, Redis, REST APIs, AWS, Docker, Celery

- Implemented semantic retrieval using PostgreSQL and PGVector to index client knowledge bases for grounded LLM responses
- Deployed containerized backend services on AWS ECS behind an Application Load Balancer with autoscaling workers
- Added Redis-based response caching and asynchronous background processing to reduce end to end query latency by 30%

Founding Full Stack Software Developer | Lab Systems (I) Pvt. Ltd., India May 2023 – Aug 2024
Tech Stack: NextJS, Python, C++, Flask, SQL/NoSQL, Cloudflare, Docker, Software Architecture, Solution Designing, AWS

- As a Founding Engineer, architected the core system architecture for a **cryptocurrency investigation** and forensic platform
- Built a **Bitcoin blockchain indexing system from scratch**, ingesting and processing data into on-premise forensic software.
- Operated and maintained multiple **blockchain nodes**, directly interfacing with node **RPCs** to retrieve address-level data.
- Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across **2+ billion blockchain transaction records**
- Created risk analysis algorithms to flag high-risk transactions across **5+ cryptocurrencies (Bitcoin, Ethereum, XRP)**; improved detection accuracy by 35%
- Built Python and C++ based backend services and integrated with MongoDB and Elasticsearch databases for production systems
- Led an engineering team and established Git-based workflows, code reviews, and release practices to maintain delivery velocity

Full Stack Software Developer Intern | Lab Systems (I) Pvt. Ltd., India Aug 2022 – Apr 2023
Tech Stack: Python, Node.js, REST APIs, MongoDB, LevelDB, Docker, Linux, Web Security, Distributed Systems, System Design

- Containerized backend services on Linux with Docker and deployed to the cloud for production stability and release consistency
- Contributed to high-profile **cryptocurrency investigation cases** with financial exposure **exceeding \$20M** for global clients

Skills

Languages: Python, C++, JavaScript

Blockchain & Data: Bitcoin, Ethereum, XRP, blockchain indexing, node RPC interfaces, large-scale data ingestion

Backend & Databases: REST APIs, Flask, Node.js, MongoDB, LevelDB, PostgreSQL, Redis

Infrastructure: Linux, Docker, AWS (ECS, EC2, ALB), CI/CD pipelines

Software Engineering: Data structures & algorithms, system design, networking fundamentals, testing (PyTest, Mocha)

Relevant Projects

LLM-Router: Intelligent LLM Selection and Cost Optimization | Tech: PyTorch, DistilBERT, CodeBERT [Project Link](#)

- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests.
- Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality

Patent

D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)

German Patent File No - 20 2023 102 823.3

Date: 19 Sep 2023

Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments
